Pharmaceutical Contract services round up

Sentry Logistic Solutions offers On-Demand, temperature-controlled pharmaceutical finishing services

By Kirsty Barnes

June 30, 2008

Sentry Logistic Solutions has announced that it is now offering On-Demand, temperature-controlled labeling, packaging and kitting services for the biopharma industry.

"Custom Finishing Services are an integral part of the pharmaceutical supply chain," said Jennifer Marcum, Sentry's CEO, adding that the ultimate goal of these new services is to "manage risk and eliminate unnecessary supply chain costs while maintaining or exceeding service levels."

Citing Center for Drug Evaluation and Research (CDER) statistics, five of the top ten reasons for pharmaceutical recalls include miscellaneous cGMP deviations, impurities in or degradation of products, lack of product stability, labeling errors on declared strength, and incorrect products in cartons or packages, costing the industry billions of dollars a year.

Sentry said because it offers a cGMP, validated storage facility and inventory management system, "good manufacturing practices are ensured, expiration dates are managed and tracked, product integrity is maintained, and labeling or re-labeling can be accurately executed to prevent costly errors".

"Sentry's On-Demand finishing services can be executed within validated temperature environments to reduce or eliminate time-out-of-temperature. Benefits of this program include decreased product risk, improved quality control, and enhanced product integrity throughout the supply chain", the firm said.
